Alex,

See my comments in red below. I am not seeing twist measurements on the Inspection Records.

David

Subject: 350 Crosstube Deviation

Hi David,

I received a few 350 crosstube deviations which I have not seen before so I would like to get your opinion on them before I proceed. Also I'm pretty sure I can't scrap crosstubes anyway.

WO: 95044 & 95045

I would justify that the deviation on these inspection sheets are acceptable. The half width is 0.04" under tolerance, which I would consider to be negligible. Since bending is the primary loading condition, I was thinking of justifying the deviation by indicating that the bending stress would be slightly reduced as a result of the smaller width. Also I don't foresee any fitment issues for the skid tubes as a result of the deviation. Agreed, as long as they are within the twist allowance

WO: 104971 & 98939

Although the width is even more under tolerance than the above case (worst case is 0.36" under tolerance with both sides combined). The difference is that these deviation affect both sides, however, for the same reason as discussed above I think these deviations are acceptable. I also don't think it is likely that there will be fitment issues for the skid tubes. I think 104971 is acceptable as long as it is within the twist tolerance. I think 98939 should be scrapped because of the dissymmetry, the high angle, and the crushing (too many problems).

WO: 98938 & 98940

My thought on these ones would be to scrap them.... the worst case has a combined under tolerance of ~1.25" inches or ~ 1.5" when compared to nominal width. Although the lower bending stress argument is still valid I think the dimensions are off enough to be noticeable. It could also be difficult to install skid tubes with this amount of deviation. Agreed. Absolute scrap.

I have not seen this type of deviation yet so I thought it would be best to get your opinion before I proceed.

Alex
